Continuation of Substance of Interview including description of the general nature of what was discussed: Examiner noted to Counsel that claim 1 as presently recited does not positively require a grafted polymer therefore would have been obvious in light of the teachings of the Argyropoulos patent, where it discloses incorporating a cellulose acetate butyrate (taken to be photochemically graftable) as an inert thickening agent to a polyurethane type adhesive. Because of this, participants agreed to amend claim 1 to positively require forming a grafted polymer (see the attached applicant's supplemental amendment for details). Additionally, participants agreed to rejoin previously restricted method claims and to cancel all claims which are directed to a composition. .
